Voted "TOP GADGET" In The Sunday Times – 23 October 2011!

This amazing iHelicopter has just been launched in the UK and already is receiving rave reviews.

It's a great product on so many levels all the way from the quality feel of the packaging, down to the awesome way you can control it from your Phone.

So, you just download the free App (Copter Controller), plug in the included IR transmitter and away you go.

Unlike other i-Helicopters on the market, this model also supports several Android phones as well: you can control it from your iPhone / iPad / iPod Touch and supported Android phones including: HTC – Desire S, Desire HD, Incredible S, Hero, Sensation; Samsung – 9100, i9000; Moto – MB525; and LG – P350.

The helicopter can be controlled Up/Down, Left/Right, Forward/Back, and thanks to the inbuilt Gyro this is pretty easy to do. The TURBO button for extra forward speed is a real bonus. Motion control is awesome fun, i.e. you can tilt the phone to make it move forwards/backwards

and left/right.

The App itself will be updated often with new features, e.g. a Flight Recording mode will be added soon, enabling you to record a flight and then the helicopter will perform the same moves again at the press of a button.

“We've been selling helicopters for over 10 years and this is without a doubt the most durable mini helicopter we've ever flown,” says the team at Paramountzone .
